Removal

- Loosen the screw (4) 4-6 turns using a T25 Torx key.
 - Tap head of M4 screw (4) to un-seat threaded wedge (2).
- Remove M4 screw (4) and threaded wedge (2) from the axle (1).
- Insert a 5mm hex key to twist the wedge (3) free and remove it (shown). If stuck, insert the long side of a 6mm HEX key (non-ball end) from the threaded end of axle and tap it out.
 - Insert a 6mm hex key into the axle and turn counter-clockwise until it can be removed.

Installation

Be sure to inspect the parts for any burrs, scratches or other damage before assembly. Replace the complete axle assembly if any damage is found.

- Apply a high-quality bearing grease to all the parts of the assembly before installing into the linkage. Be sure to coat all threads, wedge surfaces and expansion areas.
- Be sure to use the correct length axle and screw for the specific location. See above.
- Insert the axle (1) into the link from the non-drive side, and tighten it with an 6mm hex to 1.0Nm. Do not over-tighten.
- Insert the threaded wedge (2) into the drive side of the axle and insert the other wedge (3) and screw (4) opposite and tighten screw with a T25 Torx to 3.0Nm.
